Continuation of 11. does NOT place the application in condition for allowance because: Applicant's arguments attempt to place undue emphasis on what is shown in the drawings instead of what is actually claimed. Moreover, the arguments overlook how the claim language is fairly and necessarily subject to other interpretations or constructions. The circumference of the device has a circular arcuate or "curved configuration" and this curved configuration extends along the length of the device; therefore, the longitudinal axis necessarily defines the curved or arcuate configuration along the length of the device (e.g., at the very least, the axis defines the center of the arcuate or curved configuration along the entire length of the device). Similarly, whether the shoulders are "abrupt" is a matter of relative judgement, and in any event, the claims do not include language that has been defined explicitly, definitively and exclusively so as to preclude this type of a tapered configuration. Finally, the device is clearly at least capable of performing the intended use (e.g., even if not optimally and/or even if on other animal species, etc.).
